

# Erigeron sumatrensis

## COMMON NAME

broad-leaved flea-bane

## SYNONYMS

*Conyza albida* (Willdenow), *Conyza sumatrensis* (Retz.) E.H.Walker

## FAMILY

Asteraceae

## AUTHORITY

*Erigeron sumatrensis* Retz.

## FLORA CATEGORY

Vascular – Exotic

## STRUCTURAL CLASS

Herbs - Dicotyledonous composites

## NVS CODE

CONSUM

## CONSERVATION STATUS

Not applicable

## BRIEF DESCRIPTION

The plant has a branched hairy flower stalk 30 to 60 cm high, with leaves tapering to both ends (Hilgendorf 1926). The plant has numerous dingy cream heads 0.5 cm in diameter, with red-purple tinge.

## WETLAND PLANT INDICATOR STATUS RATING

FACU: Facultative Upland

Occasionally is a hydrophyte but usually occurs in uplands (non-wetlands).

## SIMILAR TAXA

*Erigeron bonariensis* is easily distinguished from the other common weedy *Erigeron* spp. by its narrow leaves, usually twisted and with wavy or undulate margins and by its larger flower heads (capitula). *E. bilbaoanus* has its bracts around each capitulum (the involucre bracts) much less hairy than those of *E. bonariensis* and *E. sumatrensis*, the latter two being distinguished most readily by the twisted vs flat leaves.

## FLOWER COLOURS

White, Yellow

## YEAR NATURALISED

1957

## ORIGIN

Subtropical S. America. Also known in New Zealand as *Conyza albida* Spreng.

## ETYMOLOGY

**erigeron:** From the Greek eri 'early' (or ear 'spring') and geron 'old', possibly alluding to the hairy seed pappus, or perhaps to the hoary appearance of the leaves of some species in the spring.
