

Juncus fockei

SYNONYMS

Verojuncus fockei (Buchenau) Závěská Drábková & Pročkův

FAMILY

Juncaceae

AUTHORITY

Juncus fockei Buchenau

FLORA CATEGORY

Vascular – Exotic

STRUCTURAL CLASS

Rushes & Allied Plants

NVS CODE

JUNFOC

CONSERVATION STATUS

Not applicable

WETLAND PLANT INDICATOR STATUS RATING

OBL: Obligate Wetland

Almost always is a hydrophyte, rarely in uplands (non-wetlands).

YEAR NATURALISED

1956

ORIGIN

Australia

ETYMOLOGY

juncus: From the Latin *jungere* 'to tie or bind', the stems of some species being used to make cord (Johnson and Smith)

TAXONOMIC NOTES

Pročkův et al. (2023) proposed a taxonomic segregation of *Juncus* into six genera based on molecular and morphological evidence. Whilst it has long been recognised that the current circumscription of *Juncus* includes morphologically divergent taxa—reflected in the recognition of numerous subgenera and sections—the consensus view of the NZPCN website taxonomy subcommittee, taking into consideration advice from Australian *Juncus* expert Dr Karen Wilson (NSW Herbarium) and others in Europe is that the generic segregations proposed need further consideration and testing. Accordingly, it has been decided to maintain the current broad circumscription of *Juncus*, but to include all new names as synonyms in factsheets. We thank, in particular, Dr Wilson for her helpful comments.
