

# Myosotis brockiei subsp. dysis

## FAMILY

Boraginaceae

## AUTHORITY

*Myosotis brockiei* subsp. *dysis* Courtney & Meudt

## FLORA CATEGORY

Vascular – Native

## STRUCTURAL CLASS

Herbs - Dicotyledons other than Composites

## CURRENT CONSERVATION STATUS

2017 | Threatened – Nationally Vulnerable | Qualifiers: OL

## DISTRIBUTION

Found in a small area between the south end of Whanganui Inlet and Sandhills Creek on the North-west coast of the upper South Island. There is a possible outlier population near Charleston further down the west coast but no plants have been found at this location in recent times to confirm its similarity.

## HABITAT

Found on, and under partially shaded lowland limestone bluffs.

## FLOWER COLOURS

White, Yellow

## SUBSTRATE

Limestone

## ETYMOLOGY

**myosotis:** Mouse-eared
